

ESEI GROUP AWARDED SOLAR SOURCE CORPORATION EPC CONTRACTS; SHAPING A RENEWABLE ENERGY VISION

September 28, 2010: Markham, ON – Through the first Canadian partnership to manufacture and develop renewable energy power plants, ESEI Solar and Solar Source Corporation are set to transform the global energy industry.

With a pipeline of residential and commercial power plants, this partnership is expected to build 100 MW of capacity over 5 years. Following quickly on Solar Source Corporation's (SSC) announcement to build a 120 MW capacity panel manufacturing plant in Windsor, Ontario, the company recognized the need to find a strong and innovative partner to expand beyond its current capabilities. SSC needed an organization that could manage all of the aspects of small to large solar PV projects; from design, installation to monitoring and maintenance.

"The ESEI team has their eye on the future, and their feet planted firmly in today, managing the industry as a whole, not just at the panel level. ESEI thought beyond programs and government incentives which is what makes them a global industry player. We want to partner with that type of thinking – so we chose ESEI Group," says Ross Beatty, President of Solar Source Corporation.

ESEI Solar, a line of business of ESEI Group, has a full offering of Engineering, Procurement and Construction (EPC) services and a team of experts that support projects across several industry verticals. Recognized by the Ministry of International Trade Development, ESEI Solar is also stretching across the globe with partnerships in Germany, Spain, and India.

The partnership between ESEI Solar and Solar Source Corporation will support the Green Energy Act's goal of creating green-collar jobs. Solar Source's manufacturing plant will employ in excess of 200 people, while ESEI Solar's new Windsor office will add even more jobs to the region.

About ESEI Group

ESEI Group manages several lines of renewable energy infrastructure businesses, such as ESEI Solar, ESEI Soft, ESEI Power and ESEI Tech. Headquartered in Markham, Ontario with regional offices in Belleville, Ottawa and Sarnia, and global offices in Germany, Spain and India. ESEI Group has 33 employees.

ESEI Solar is a full provider of EPC services for clients and partners across North America, with 50 + project developers located across Ontario and the U.S.

ESEI Soft is an energy management and energy intelligence software that provides analytics for plant owners to monitor and troubleshoot issues proactively. This tool allows financial institutions and insurance companies to better forecast plant performance.

ESEI Power is a renewable energy plant developer and owner/operator establishing a network of leased lands and rooftops throughout North America.

ESEI Tech is a manufacturer of renewable energy components: racking, trackers and applied energy systems (Energy In a Box™, EcoPlug In™).

About Solar Source Corporation

Solar Source Corporation (SSC) is a Canadian renewable energy holding company wholly owned by Solar Bancorp Inc., a Canadian solar focused merchant bank. Solar Source Corp. wholly owns three separate sub-corporations, with related products, services, markets and opportunities. The sub-corporations include Solar Source PEI (SSPEI), Solar Source Ontario (SSO) and Solar Rooftops Corp (SRC). Solar Source Ontario will manufacture its brand of solar panels in Windsor, Ontario. Solar Rooftops Corp. is the sales, marketing and installation company located in Toronto, Ontario.

Solar panel sales for the SSC brand will have a strong focus on Municipal and Provincial Governments, power utilities, large corporate and residential rooftop owners who are looking to reduce their carbon footprint and access provincial government Feed-In Tariffs for their installed solar panels.
